

Abstract

5 Aqueous pretreatment liquor for preparing a textile substrate for inkjet printing, comprising

- (A) one or more polycationic compounds,
- (B) one or more thickeners,
- 10 (C) optionally customary additives,
- (C) water.

Preferred polycationic compounds (A) are polymers or copolymers of diallyldialkylammonium monomers.

15 Preferred thickeners are obtainable from

- (i) polyetherdiols,
- (ii) diisocyanates and
- (iii) compounds, R of the general formula R-OH, R-SH, R-NH₂, RR'NH or R-COOH,
- 20 where R is a hydrophobic aliphatic or aromatic radical of at least 4 carbon atoms and R-OH may have been alkoxylated, and also further derivatives thereof that are capable of forming a urethane, thiourethane or urea bond,

or from

- (i) polyetherdiols with

- 25 (iv) compounds of the general formula R-OH or R-COOH, where R is a hydrophobic aliphatic or aromatic radical of at least 4 carbon atoms and R-OH may have been alkoxylated, and also further derivatives thereof that are capable of forming an ether or ester bond, and

30 or from compounds (ii) and (iii).
